Groundwater

At NWWC take great effort to ensure that water reaches our clients for all of their needs. To this end, we offer water well inspections, pump repairs, and much more. With its expertise in installing and maintaining pumping equipment, and with its network of specialized vendors, NWWC is the nation's authority on well pumping systems. We accomplish our projects adhering to the most rigorous of standards to ensure that wells are safely bored for both the environment and our clients' use.

Commercial Building Services

The philosophy of Commercial Business Services is to continuously think and re-think architecture and building design in order to help clients meet both their small and large scale challenges. In addition to waste solutions, NWWC also offers economical plumbing services for large and small-scale building and domestic service projects. Some of these services include drainage, firefighting systems, and water supply.

Sewage & Drainage applications

NWWC serve infrastructure projects through its partners provides high quality products as sewage pumps, huge drainage pumps and intake pumps which shall be used in lift stations, sewage treatment plant and storm water drainage network.

Water Treatment Plants

NWWC with its strategic partners and suppliers provide complete water and wastewater treatment solutions by using the highest standards and latest technologies. Our pre-engineered and customized products and plants are designed to operate at the optimum cost and minimum maintenance to serve all different applications (SeaWater -WasteWater-Industrial Wastewater)

Water Transmission

Transferring water from resources to consumers is one of the important parts in water system, this part needs huge amount of energy, so it is must to use high tech and premium efficiency products. NWWC provides green solutions with energy saving products, the highest efficiency pumps & motors are the distinguishing features of those products Which Shall be used in Irrigation, agriculture, livestock applications

Industrial Plants

Real power comes from innovation, and for many years NWWC has worked with those who dared to experiment with new ideas and methods. As global energy demands continue to change energy suppliers are expected to meet them reliably and economically, while also protecting the environment. We understand this and are prepared to do so by implementing solid solutions and environmentally friendly products.
